WELCOME

Successful implementation of direct printed aligners in your orthodontic office: Enabling next level aligner treatment with effective clinical protocols and efficient in-office laboratory workflows.

Conventional aligner treatment has been more popular than ever in the orthodontic office with more and more aligner providers emerging in the market. In-office aligner production has hence also become more popular due to more affordable 3D technology and AI guided software solutions. The introduction of the first printable shape memory aligners makes in-office aligner production not only more efficient, but allows more predictable clinical results with less aligners. Same day aligner concepts for more patient service and new marketing possibilities are also possible for the orthodontic specialist. This course will demonstrate the full scope of advantages for your laboratory and your clinical application, while also giving a practical insight and guideline on how to efficiently make use of this new technology in your orthodontic office.

09:00	Registration and Welcome / Start Intraoral Scan
09:30	Presentation: Successful implementation of direct printed aligners in your orthodontic office: Enabling next level aligner treatment with effective clinical protocols and efficient in-office laboratory workflows.
10:30	Coffee Break
10:45	Software Workflow Live Demonstration: Blueskybio planning / Support Software
11:45	Live Demonstration Aligner Print Workflow: Take of Aligners / Centrifuge / Remove supports / Put into light curing / Hands-on: Start Printers with Prints
12:30	Lunch Break
13:15	Hands-on Workshop: Remove Aligners, centrifuge, supports, light cure
14:15	Coffee Break
14:30	Presentation: Biological aspects of direct printed aligners
14:45	Post processing and clinical application direct printed aligner
15:30	Discussion and end of event
